APPENDIX:

Inventory Forms 26

INTRODUCTION

In May, 1990, Janus Associates, Inc. entered into a consultant contract with the City of Phoenix, Planning Department, Historic Preservation Office, to conduct an in-depth survey of historic resources related to three thematic categories. The three themes are:

1. **Nineteenth Century Construction**: A documentation of all surviving buildings and structures built prior to the end of 1900.

2. **Historic Public and Institutional Buildings**: A documentation of all historic schools, churches, and public buildings within the community.

3. **Agricultural Heritage Resources**: A documentation of early farmsteads, homesteads and their associated structures, as well as other residential development associated with early twentieth century agricultural development in Phoenix.

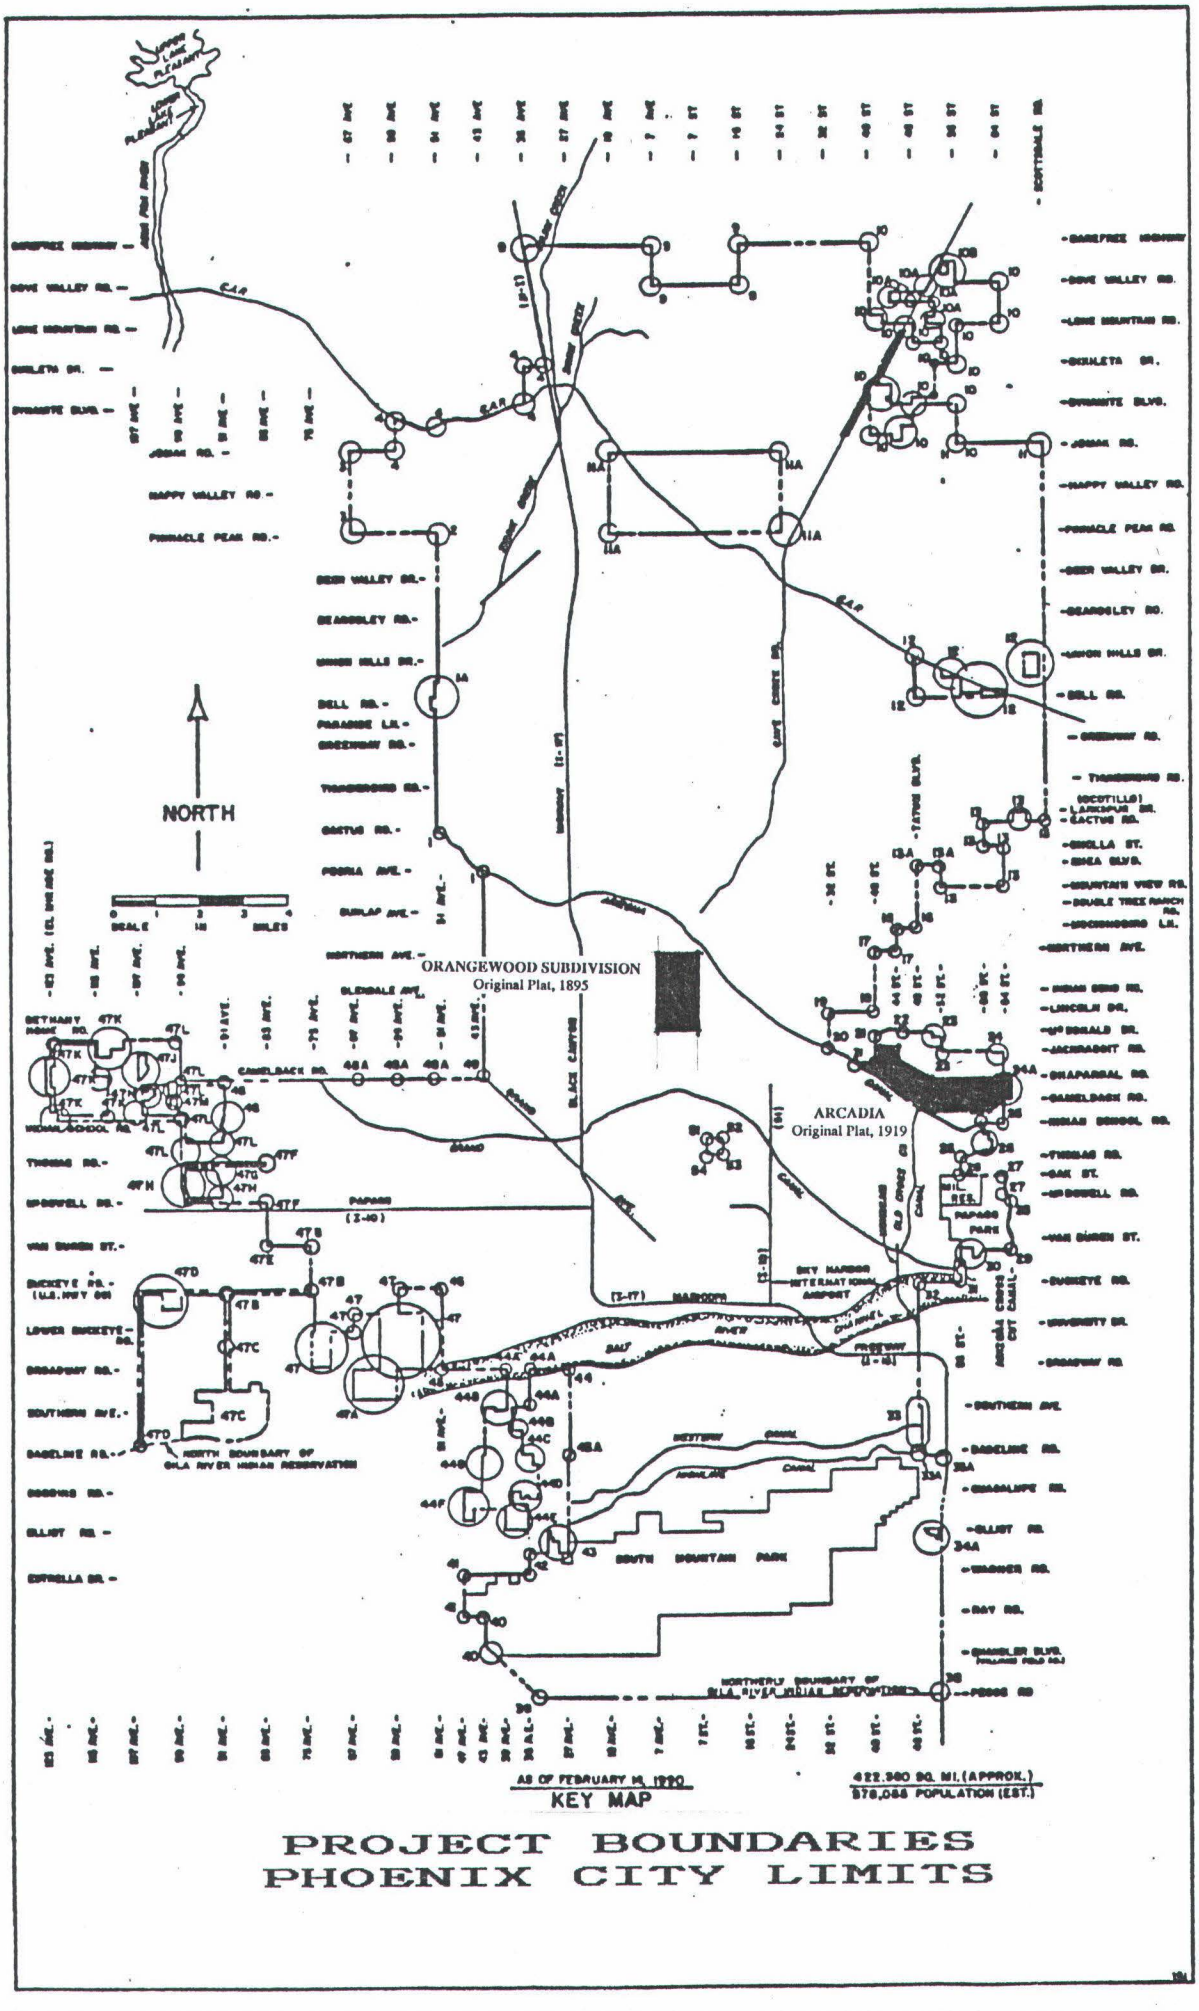

The geographic area for the three surveys was city-wide and included 422 square miles within the jurisdictional boundary of the City of Phoenix. 422 square miles is 270,080 acres.

The final product of these surveys is three separate reports or documents outlining the methodology, results, and historic property inventory for each thematic category, as well as written narratives discussing the significance of each theme.

For the first two thematic surveys, namely the surveys representing Nineteenth Century Construction and Historic Public and Institutional Buildings, two separate inventory lists were produced. The first list, identified as the Inventory of Previously Documented Resources, includes a comprehensive inventory of all existing resources associated with that theme including those that 1) had been previously inventories in other Historic Building Surveys, and 2) were already listed on the National Register. The second inventory list includes the buildings that were documented as part of that particular survey. Identified as the Inventory of Historic Buildings (by Theme) For This Survey, its purpose was to separate the survey work undertaken for this project form work previously undertaken.

However, for this thematic survey, representing Agriculture Heritage Resources, only one inventory list was utilized. Identified as the Rural and Estate Architecture Master Inventory, this list includes buildings that were documented as part of this particular survey. This list is further subdivided into four separate quadrants based on geographical areas using Central Avenue and Camelback Road as dividing lines. Each quadrant has also been assigned its own range of inventory numbers as follows: Northeast Quadrant (500s), Southeast Quadrant (600s), Southwest Quadrant (700s), and Northwest Quadrant (800s).

While one previous survey has been undertaken in Phoenix which specifically identified agricultural related resources, namely the South Mountain Agricultural Area Historic Resources Survey (geographical boundaries included that area of Phoenix south of Baseline Road), a list of the buildings it documented was not reproduced in this survey. Consequently, for information concerning agricultural related buildings in Phoenix located south of Baseline Road, the South Mountain Agricultural Area Historic Resources Survey (Ryden Architects, 1989) should be consulted.

PROJECT BOUNDARIES
PHOENIX CITY LIMITS

METHODOLOGY

Establishing the Survey Area

The purpose of this survey was to document all existing Agricultural Heritage Buildings within the Phoenix city limits which had not previously been documented in other agricultural related surveys. Therefore, the first step taken in order to determine the survey area was to consult with the Arizona State Historic Preservation Office and the Phoenix Historic Preservation Office in an effort to identify existing surveys undertaken in Phoenix which specific intent was to identify agricultural related properties. It was determined that prior to this survey, only one such agricultural related survey existed, namely the South Mountain Agricultural Area Historic Resource Survey. The boundaries of this survey generally included the area of Phoenix which lies south of Baseline Road. Consequently, it was determined that the survey area for this project was all the area included within the Phoenix city limits with the exception of that area included within the boundaries of the South Mountain Agricultural Area Historic Resource Survey.

Field Survey

Once the survey area had been defined, copies of the original 1937 Maricopa Highway Maps were obtained. These maps were used as the base field survey maps because they indicated both the location and primary function of all buildings constructed in Phoenix prior to 1937. One of the functions identified on these maps were buildings related to agriculture.

The field survey was then conducted using the information gleaned from the 1937 Maricopa Highway Maps. Because the survey area was relatively large, it was broken down into four quadrants using Central Avenue and Camelback Road as dividing lines. Each quadrant was assigned its own range of inventory numbers as follows: Northeast Quadrant (500s), Southeast Quadrant (600s), Southwest Quadrant (700s), and Northwest Quadrant (800s). The location of each agriculture related building indicated on the 1937 maps was visited to determine whether or not it still existed. Where a building was found, an inventory form was completed and a photograph taken. Where a building no longer existed, a notation was made on the map.

There are two exceptions and/or additions to the field survey process as described above. First, the 1937 Maricopa Highway Maps did not differentiate between agricultural buildings associated with early farmsteads, homesteads and their associated structures located on lots or ten acres or more, and those agricultural buildings associated with mini-farms or those buildings located in rural subdivisions. Since the stated purpose of this survey was to identify those buildings associated with the larger farms or ranches and rural estate development in Phoenix, a decision was made in the field as to which category an existing building belonged. Buildings associated with mini-farms or located in rural subdivisions were not included in this survey. Second, obviously the 1937 maps would not identify agricultural related buildings built between 1937 and 1942. Therefore, while in the field, survey team members also identified and documented agriculture buildings which did not appear on the 1937 Maricopa County Highway Maps, but which because of their location and/or architectural style appeared to be constructed between 1937 and 1942.

SUMMARY AND RECOMMENDATIONS

The results of the survey of Rural and Estate Architecture produced an inventory of **158** properties. That inventory did not include resources associated with the same context that were identified in the South Mountain Agricultural Area Historic Resource Survey, prepared in 1989.

The inventory is summarized below according to the number of historic properties classified in each of the four historic property types. Of the total **158** properties, **130** are recommended as eligible for listing in the City or National Register.

Property Type No. 1: Agricultural Properties Built Before 1911.

A total of **15** resources of this property type were identified in the survey. Their registration potential for listing in the City or National Register is:

Recommended Eligible Properties:	13
Recommended Not Eligible Properties:	02
TOTAL	**15**

Property Type No. 2: Rural Estate Architecture Built Before 1911.

A total of **3** resources of this property type were identified in the survey. Their registration potential for listing in the City or National Register is:

Recommended Eligible Properties:	3
Recommended Not Eligible Properties:	0
TOTAL	**3**

Property Type No. 3: Agricultural Properties Built After 1911 and Before 1942.

A total of **50** resources of this property type were identified in the survey. Their registration potential for listing in the City of National Register is:

Recommended Eligible Properties:	37
Recommended Not Eligible Properties:	13
TOTAL	**50**

Property Type No. 4: Rural Estate Architecture Built After 1911 and Before 1942.

A total of **90** resources of this property type were identified in the survey. Their registration potential for listing on the City or National Register is:

Recommended Eligible Properties:	78
Recommended Not Eligible Properties:	12
TOTAL	**90**

A Master Inventory list follows. It identifies each resource by number, name and/or address, recommended eligibility, and property type classification.

AGRICULTURE AND RURAL DEVELOPMENT IN THE CENTRAL SALT RIVER VALLEY, 1867-1942

Introduction

The history of the development of rural lands surrounding the historic urban area of Phoenix can be divided into two major periods, each with its own distinct land use patterns. The two periods are distinguished by the most important event in local agricultural history: the completion of the Bureau of Reclamation's Roosevelt Dam in 1911.

The period of the Salt River Valley's history that preceded the construction of the dam was characterized by initial canal building for irrigation with water from the Salt River, and the settlement and homesteading of the irrigable lands. The development and eventual consolidation of the canal systems occurred during the 1880s and 1890s. The period was also characterized by a great deal of land speculation and promotion, but only modest commercial agricultural success caused principally by the unpredictability of adequate water for irrigation. Additionally, during this pre-reclamation era, land ownership patterns included a disproportionately high number of large tracts of land controlled by a few land owners.

The period after the Roosevelt Dam was built was characterized by a steady, controlled system of irrigation, overseen by a water users association, and guided by the laws and regulations under the jurisdiction of the Bureau of Reclamation. The transformation that occurred after 1911 not only greatly improved commercial agriculture, but also altered land ownership patterns. The most noticeable effect that the Salt River Valley Reclamation Project had on the development of rural areas was the steady and substantial increase in smaller farmsteads as the larger tracts were broken up and sold to accommodate increased immigration, and to satisfy federal laws.

Property Types

During both the pre-reclamation period and the time after the construction of Roosevelt Dam, the rural land use patterns included principally farming and agricultural related uses. However, during each period, some rural lands were subdivided into large residential tracts and promoted as sites for rural or country estates. The purpose was not to provide sufficient land for farming purposes, but rather to provide an atmosphere of country living, in a setting surrounded by farming lands and on tracts that were developed, in many cases with orchards and tree lined streets.

Given the land use development patterns of both periods, four types of rural property types can be distinguished. First are those properties that were built for agricultural purposes from 1867 to 1911. They include homesteads, ranch houses, farmsteads and related support buildings that were constructed initially on agricultural tracts of twenty acres or larger. Those properties represent the initial and earliest agricultural enterprises in the Salt River Valley.

Second are those properties that were built as rural or county estate homes, usually in subdivisions developed for that purpose between 1885 and 1911. They include single family

residences, mostly of substantial size, and sometimes carriage houses, garages, and well houses. The size of the tracts range from about an acre up to five acres. Those properties represent the first attempts to create rural, suburban districts for the wealthy in the central Salt River Valley. The two most prominent such developments from this period were Ingleside (which no longer exists) and Orangewood on North Central Avenue.

The third are those properties developed after 1911, and used principally for agricultural purposes. They include farmsteads, ranch houses and associated farm buildings like barns, packing sheds, garages and well houses, that were constructed on tracts of twenty acres or larger. Those properties illustrate the agricultural history of the Salt River Valley during the first thirty years of the Reclamation Era.

The fourth are those properties that were built as rural, or desert estate homes, almost all located in subdivisions developed for that purpose after 1911. They include large, single family residences located on irrigated tracts, many developed with orchards. They also include modest size to substantial residences built in a desert setting on non irrigable lands and on the slopes of the Valley's mountain ranges. The size of the estate tracts ranged from one to five acres. Those properties represent large scale efforts to create suburban estate "communities" in the Valley. They also represent the initial efforts to promote and develop residential tracts in a desert environment. The most ambitious examples are the Arcadia development, and Paradise Valley, just outside Phoenix' city limits.

Agricultural Development Prior to the Advent of the Salt River Valley Reclamation Project

Initial Settlement

The American settlement of the Salt River Valley began in 1867 when John Y.T. Smith established a hay harvesting camp on the north bank of the Salt River. Smith came to the Valley in 1866 as Assistant Wagonmaster for the U.S. Army post at Fort McDowell. Smith harvested and sold the wild hay along the Salt River's banks and transported it to Camp McDowell. In late 1867, John W. Swilling, a Wickenburg miner, organized the Swilling Irrigation and Canal Company and constructed an irrigation ditch on the north bank of the Salt River, upstream from the Smith hay camp. Crops irrigated by the Swilling Ditch were first harvested in the spring of 1868.

By 1870, a growing community that supported a homesteading and farming population of 270 people had been established near Swilling's Ditch. It was known as the Phoenix Settlement, and supported a post office, some businesses, and a flour mill. The official Phoenix Townsite, however, was established in October, 1870, about two miles west of the Phoenix Settlement. The new Phoenix Townsite quickly became the County Seat of the newly created Maricopa County in February, 1871.

The initial success of irrigation in the Salt River Valley prompted additional canal building and homesteading between 1870 and 1885. Those efforts opened up more than 50,000 acres of arable land to cultivation. By 1870, the Swilling Ditch had been extended westward a total of 19 miles and became known as the Salt River Valley Canal. From 1870 to 1872, the Maricopa Canal was built as the north extension of the Salt River Valley Canal. By 1879,

the twenty-seven mile long Grand Canal was constructed. It provided water for irrigation to a large portion of the western valley, extending to the Agua Fria River.

Canal System Expansion and Consolidation

The period between 1885 and 1892 was a significant turning point for agricultural development in the Salt River Valley. A steady flow of water in the canals and the realization that the Valley had the capability of producing agricultural products in commercial quantities, contributed to the fairly rapid development and growth of the area.

The beginning of this period was marked by the completion of the 44-mile long Arizona Canal, which its builders claimed opened up an additional 100,000 acres of desert to potential agricultural development. The exhaustive and intense promotional efforts and boosterism by the Arizona canal builder and land developer W.J. Murphy, contributed greatly to the first extensive exposure of the Salt River Valley to the rest of the country. Immigration of settlers and homesteaders increased fairly rapidly during this time. The founding of the westside agricultural communities of Peoria, Glendale, and Alhambra were also the results of Murphy's promotional efforts to colonize the Valley.

Local promotional efforts were timely considering the increased interest of Midwestern and eastern capitalists in the investment opportunities of irrigation developments throughout the west. The movement at the national level encouraged immigration and colonization of these newly reclaimed desert lands, and the period was appropriately dubbed the "Irrigation Age" of the west.

Organized promotional efforts by local capitalists such as Murphy, included illustrated brochures and pamplets extolling the Salt River Valley as the "land of fruit and flowers," and as a formidable competitor with the verdant valleys of California. At a broader level, periodicals, such as Irrigation Age and the University of Arizona's Agricultural Bulletins, provided advice on the cultivation methods to homesteading and novice farmers on the intricacies of arid land irrigation farming. Governmental agencies, such as the Territorial Immigration Commission and the Maricopa County Immigration Board, were established by the 1880s to help promote and provide information about settlement in Arizona and the Salt River Valley. In the late 1880s, an Agricultural Experiment Station, operated by the U.S. Department of Agriculture, was in operation on Grand Avenue about a mile northwest of Five Points.

Political events also strenghtened the Salt River Valley's statue as a promising area. Phoenix, which became the County Seat in 1879, was established as the Territorial Capital in 1889. In 1892, the U.S. Indian Industrial Training School was opened on a large farm tract three miles north of central Phoenix. It was one of the largest off-reservation schools in the United States. The Arizona legislature, in 1886, also established the first Insane Asylum in the Territory at Phoenix.

The first railroad link to the Salt River Valley was accomplished in 1887 with the construction of the Maricopa and Phoenix Railroad to Tempe. The line was extended to Phoenix in 1888, thus connecting the central Salt River Valley to the Southern Pacific's transcontinental line at Maricopa. Agitation for the north-south line connecting Phoenix with the Santa Fe Railroad route through northern Arizona was begun during this time. The Santa Fe, Prescott

and Phoenix Railway was completed in 1895 and extended from Phoenix along Grand Avenue to Wickenburg and north to Ash Fork via Prescott. The coming of the railroads greatly increased the Valley's commercial agricultural potential by allowing for the rapid transportation of the region's farm products to markets outside the Valley and Territory. After 1895, cattle feeding in the Valley became profitable due to the availability of cheap transportation of the fattened livestock.

Consolidated ownership of the major canals north of the Salt River was achieved in 1889. The system was purchased by the Arizona Improvement Company, a corporation established by W.J. Murphy to serve as agents for various land companies and canal companies. The company consolidated ownership of the Arizona Canal, Grand Canal, Maricopa Canal, and the Salt River Valley Canal companies, controlling stock and water rights to those irrigation systems.

In periods of drought, the issue of water rights and allocation became the focus of valley farmer's as their livelihood depended on a continuous steady water supply. In times of flooding, the canal companies' lack of timely response to repairing and rebuilding the diversion dams, canals, and head gates further exasperated local farmers.

The Kibbey Decision, handed down in 1892 by Territorial Supreme Court Judge Joseph H. Kibbey, resolved much of the water rights conflict. In a suit over the water rights of the various canal companies, the Kibbey Decision established that title to irrigating water is inherent in the land irrigated, and not the company diverting the water and delivering it through their canals. The Kibbey Decision also decreed that the priority of water rights lay in the time at which the water was put to "beneficial use" on any particular parcel, and not in the date of construction of any particular canal. The decision effectively diminished the value of the canal companies by eliminating shares of water rights as a company asset. The decision, however, did not solve the real problem behind the conflict between farmers and canal owners, which was the shortage of water in the time of drought.

Between 1870 and 1900, the population in the Salt River Valley jumped from about 270 to about 20,000. The Valley became a network of small agricultural communities with Phoenix as the central city. Boosterism continued in the late nineteenth century, but was tempered by the growing realization by Valley farmers that the continued unpredictable water supply for irrigation would have a disastrous effect on the economy of the area. Severe droughts from 1893 to 1898 and from 1901 to 1904 caused heavy losses to the agricultural industries of the Valley, particularly the highly promoted fruit growing enterprises. Cattle grazing declined sharply in the surrounding grazing land, which had been overutilized during the previous decade, causing a significant downturn in the Valley livestock growing industry. Intermittent floods from 1901 to 1904 continually breached canal banks, washed out head gates and laterals, and flooded crop land.

The results of the water fluctuation in the Valley's canals during this period was significant: nearly two-thirds of the farmland reclaimed in the 1880s became unproductive, much of it returning to desert. A number of settlers who arrived in the 1880s had sold out their interests by the turn of the century, many moving to California.

The "water question" had, by the mid-1890s, become the ire of most Valley farmers. A stable, predictable system of irrigation was seen as the only long term solution to the local agricul-

tural economic crisis. Construction of a dam in Tonto Basin to create a storage reservoir for irrigation had long been recognized as possible solution. Financing the construction of a dam, the role of the federal government in such a project, and an equitable means of water distribution and allocation caused considerable local and national debate during the last decade of the nineteenth century. The passage of the National Reclamation Act of 1902 was a significant event, one which was due in large measure to the lobbying efforts of Salt River Valley farmers. The Act established the Reclamation Service and authorized the agency to implement and finance reclamation projects in the west, including the construction of dams and storage reservoirs. Users of reclamation project irrigation systems were required to form cooperative associations to manage the system and pay for improvements financed by the federal government. By the end of 1902, the Salt River Valley Water Users Association had been formed, and in March 1903, federal legislation authorizing the construction of Roosevelt Dam had been passed. The answer to the water problems that had plagued Valley farmers for nearly forty years had been realized. Work on construction of the dam began in 1906, signaling the beginning of a new "Reclamation Era" in the Salt River Valley.

Rural Estate Development Prior to 1910

In addition to promoting the settlement of farms and ranches in the agricultural areas surrounding Phoenix, another development concept emerged. That concept was the creation of rural estate or country home suburbs for the upper class citizens of Phoenix. The idea was to provide Phoenix with a balanced image of a metropolitan city, furthering the appeal of the area to wealthy outside investors and immigrants. The idea was clearly patterned after the Garden City Suburbs of Chicago and Los Angeles. The most prominent and successful subdivisions of this kind were developed beginning in the late nineteenth century along north Central Avenue and focusing around the Orangewood Subdivision.

Orangewood

Bounded by Northern Avenue to the north, 7th Street to the east, Bethany Home Road to the south, and 7th Avenue to the west, the Orangewood Addition was originally platted and recorded in 1895 by William J. Murphy. The plat consisted of eight blocks with each block further divided into twenty lots of twenty acres or less.

The central idea behind the development of Orangewood was to create a suburb of Phoenix "wherein might be established rural homes at an easy distance from the city." It was hoped that the large lot size would attract a more affluent homeowner who would take advantage of the large lot size and build a large estate home surrounded by citrus groves.

Three subdivisions of the Orangewood Addition between 1895 and 1942 include Woodson Place, Subdivision of Lot 18, Block 5, and Wilder Place. First recorded by Richard M. Tuckey in 1922, Woodson Place was a subdivision of Block 4, Lots 13 and 14 in the Orangewood Addition. The subdivision featured eight lots, four of which faced Central Avenue and the creation of Tuckey Lane. Second, Wayne Thornburg recorded the subdivision of Lot 18, Block 5 of the Orangewood Addition in 1927. This subdivision divided the acre into five tracts. Tracts A through D were 1.5 acres and Tract E was 3.1 acre. Third, the Orangewood Reality Company along with Charles E. Borah and James E. Creighton recorded Wilder Place in 1940. Wilder Place, a subdivision of Block 6, Lot 12 and

ORANGEWOOD

MARICOPA COUNTY, ARIZONA.

KNOW ALL MEN BY THESE PRESENTS, that I, William J. Murphy, being the owner of Sections Five and Eight, in Township Two North, Range Three East of the Gila and Salt River Base and Meridian, in Maricopa County, Arizona, being desirous of platting and subdividing the same into tracts of twenty acres or less, I have caused the same to be surveyed and platted; and the annexed plat, showing lots, blocks and subdivisions, name and width of each street and road, is a true and correct plat of the same; and I the said William J. Murphy, as owner thereof, do hereby dedicate the streets and roads as marked on said plat to the public for their general use, except Central Avenue which is dedicated to the public subject to a deed heretofore made by me to the Central Avenue Driving Association bearing date July 1st, 1895.

Laura F. Murphy, wife of the said William J. Murphy, hereby joins herein for the purpose of releasing her dower interest in that portion of the above premises hereby dedicated for streets and roads.

Witness our hands this second day of July, A. D. 1895.

William J. Murphy
By W. H. Rob
Laura F. Murphy.

Territory of Arizona, } ss.
County of Maricopa,

Before me, H. F. Robinson, a Notary Public in and for the County of Maricopa and Territory of Arizona, on this day personally appeared W. H. Robinson, known to me to be the attorney in fact of William J. Murphy, the grantor described in and who executed the above and foregoing instrument by his attorney, and known to me to be the person whose name is subscribed to the foregoing instrument, and who subscribed the name of the said William J. Murphy to said instrument and he acknowledged to me that he executed the same as the act and deed of the said William J. Murphy for the purpose and consideration therein named.

Given under my hand and seal of office this 15th day of July, A. D. 1895.

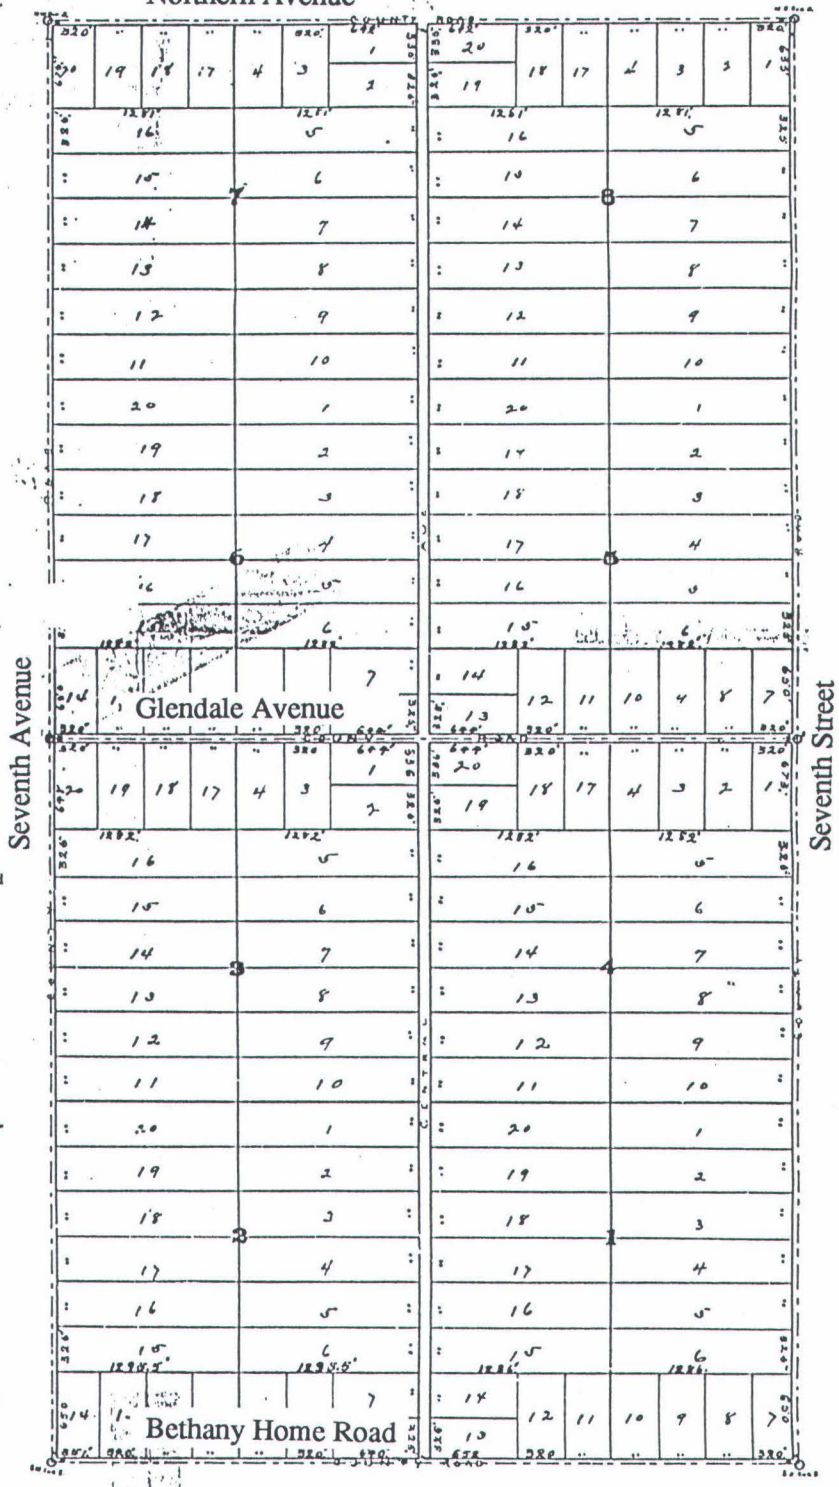

H. F. Robinson
Notary Public.

Territory of Arizona, } ss
County of Maricopa.

Before me, H. F. Robinson, a Notary Public in and for the said County of Maricopa, on this day personally appeared Laura F. Murphy, wife of the said William J. Murphy, known to me to be the person whose name is subscribed to the foregoing instrument and having been examined by me privily and apart from her husband and having the same fully explained to her, she the said Laura F. Murphy acknowledged such instrument to be her act and deed, and declared that she had willingly signed the same for the purpose and consideration therein named, and that she did not wish to retract it.

Given under my hand and seal of office this 15th day of July, A. D. 1895.

H. F. Robinson
Notary Public.

the W1/2 E1/2 of Lots 15 and16 located in the SW1/4 of Section 5, T2N, R3E, was divided into nine tracts.

After Murphy recorded the initial plat for Orangewood in 1895, several additional developers platted and recorded sections of land in the same vicinity with similar features as the Orangewood Addition. First, J.M. Evans platted and recorded the Evan's Addition to Orangewood in 1897. Located in Section 17, T2N, R3E, directly to the south of the Orangewood Addition, Evan's Addition to Orangewood was bounded by Bethany Home Road to the north, 7th Street to the east, Camelback Road to the south, and 7th Avenue to the west. This addition features four blocks divided into twenty lots apiece.

Evan's Addition to Orangewood was subdivided nine times between 1897 and 1942. These include Lamson Subdivision (1913), Colter Tract (1913), Medlock Place (1926), South Medlock Place (1927), Orangewood Estates (1928), E.L. Grose Tract (1937), South Orangewood (1937), and Aldrich Place (1939). Additionally, the majority of the area included in the Colter Tract was subdivided again in 1929 as the Winsor Tract.

Second, in 1909 H. Marlenee platted and recorded the Orangewood Annex. Bounded by Northern Avenue to the north, 12th Street to the east, Orangewood Avenue to the south, and 7th Street to the west, the Orangewood Annex featured a total of twenty acres divided into four, five acre lots.

Agricultural Development After the Construction of the Roosevelt Dam

The construction of Roosevelt Dam brought "vital stability to the water supply" and hence, growth to the Salt River Valley. The dedication of the dam in 1911 was symbolic of the Valley's emergence as a formidable agricultural center in the state. The time also marked the beginning of the first significant population and development boom in the Valley's history.

Several reclamation related events that solidified the individual landowner's rights and further protected them against the effects of flood and drought, occurred between 1910 and 1930. The Kent Decree of 1910 determined stored water rights for each land parcel in the Valley. The doctrine of prior appropriation in determining priorities for the normal stream flow, established by the Kibbey Decision, continued to be followed. Water stored in the Roosevelt Dam reservoir, however, required new criteria for allocation. The Kent Decree, agreed upon by the Reclamation Service and the Salt River Valley Water Users Association, divided stored waters proportionately according to the acreage of the land.

The reclamation project also sponsored construction of the Granite Reef Diversion Dam on the Salt River to control the water flow from the river into the Arizona Canal on the north and the Santa Canal on the south. The Salt River Valley Water Users Association assumed control of the canal irrigating system in 1917, thereby centralizing local management of what would eventually become the Salt River Project.

Between 1922 and 1930, the Salt River Valley Water Users Association, in conjunction with the Bureau of Reclamation, built three new dams on the Salt River. The dams provided year around water supply and storage, some flood protection, and hydro-electric power for the Valley's developing industries and growing population. Mormon Flat Dam was built between 1923 and 1925, Horse Mesa Dam was completed in 1927, and Stewart Mountain

Dam was finished in 1930.

As more land came under irrigation, agricultural production increased and diversified. World War I also brought an agricultural boom to the Valley as the market for farm products increased. By 1919, cotton had become the Valley's most important cash crop. Other important agricultural ventures included dairy farming, citrus growing, and truck farming, principally lettuce and cantaloupes.

One of the most noticeable effects that the Salt River Valley Reclamation Project had on the development of rural areas was a change in the land use patterns from large agricultural tracts to smaller farms an ranches. That pattern of land use altered the character of Phoenix' surrounding agricultural lands, and expanded the role of farming or agricultural districts in the outlying areas. Those districts assumed greater identities of their own and many emerged as nearly autonomous commercial and social centers of their region. Those districts were, by geographic as well as civic reasons, organized as "communities," often in relationship to rural school district boundaries. Some districts were distinguished with core areas, usually near the school building, that included clusters of commercial buildings and perhaps a church. Evolution of some of the districts eventually included rural residential subdivisions of "mini-farms." Those tracts offered lots ranging in size from one-half to five acres. While rural in character, they were quite distinct from larger, fully operational farms and ranches.

In the north and east central Valley, two such farming districts emerged as distinct entities, eventually including the patterns of commercial, social, civic, and subdivision development. They were the Creighton District and the Osborn District. The Creighton District focused originally on the William Creighton Homestead, eventually including a nearby school, and was developed with a commercial focus on east McDowell Road, and mini-farm subdivisions north of McDowell. The Osborn District was located in the area north of Thomas Road between 16th Street and 19th Avenue, with the farms served primarily by the Grand Canal. The district supported two historic schools, Longview and Grandview, and eventually developed commerce and mini farm subdivisions near both schools.

On the western side of the Salt River Valley, three farming districts evolved with their own identities: the Cartwright District, focusing on the area around west Thomas Road and 59th Avenue; the Fowler District, located to the south of west McDowell Road between 59th and 83rd Avenues; and the Alhambra District, focusing on the original Alhambra Townsite near Indian School Road and Grand Avenue. The Fowler and Cartwright farming districts evolved from successful homesteads that bear their names, and include two of the oldest rural schools built in the west Valley. Both districts, due largely to their distance from central Phoenix, developed their own commercial centers, churches, and other social and civic facilities.

To the south of Phoenix, the Roosevelt District was the largest and most developed during the period from 1910 and 1940. Its focus was Roosevelt School at 7th Street and Southern. The district was generally bounded by the Salt River to the north, South Mountain on the south, and 40th Street and 35th Avenue to the east and west. Several mini-farm subdivisions were developed primarily in the area of Broadway Road to Southern Avenue near Central Avenue.

Rural Estate Development in the Central Salt River Valley, 1920 to 1940

With the implementation of the Salt River Valley Reclamation Project, development of irrigable lands in the suburbs of Phoenix as large, rural homesites became a viable alternative land use. Single, independent construction efforts by some wealthy landowners was not uncommon. They built large estate homes on their own land or sold portions of their property to others for similar purposes. An alternative, and more ambitious concept, was the development of large tracts of land, specifically for the purpose of creating upper class, rural estate suburbs. The concept involved assembling sizeable real estate, from several owners, then surveying, platting, and marketing the subdivision. Because assembling the necessary real estate in the Valley's relatively mature agricultural environment was difficult, only one such subdivision emerged in the central Salt River Valley: the Arcadia Subdivision.

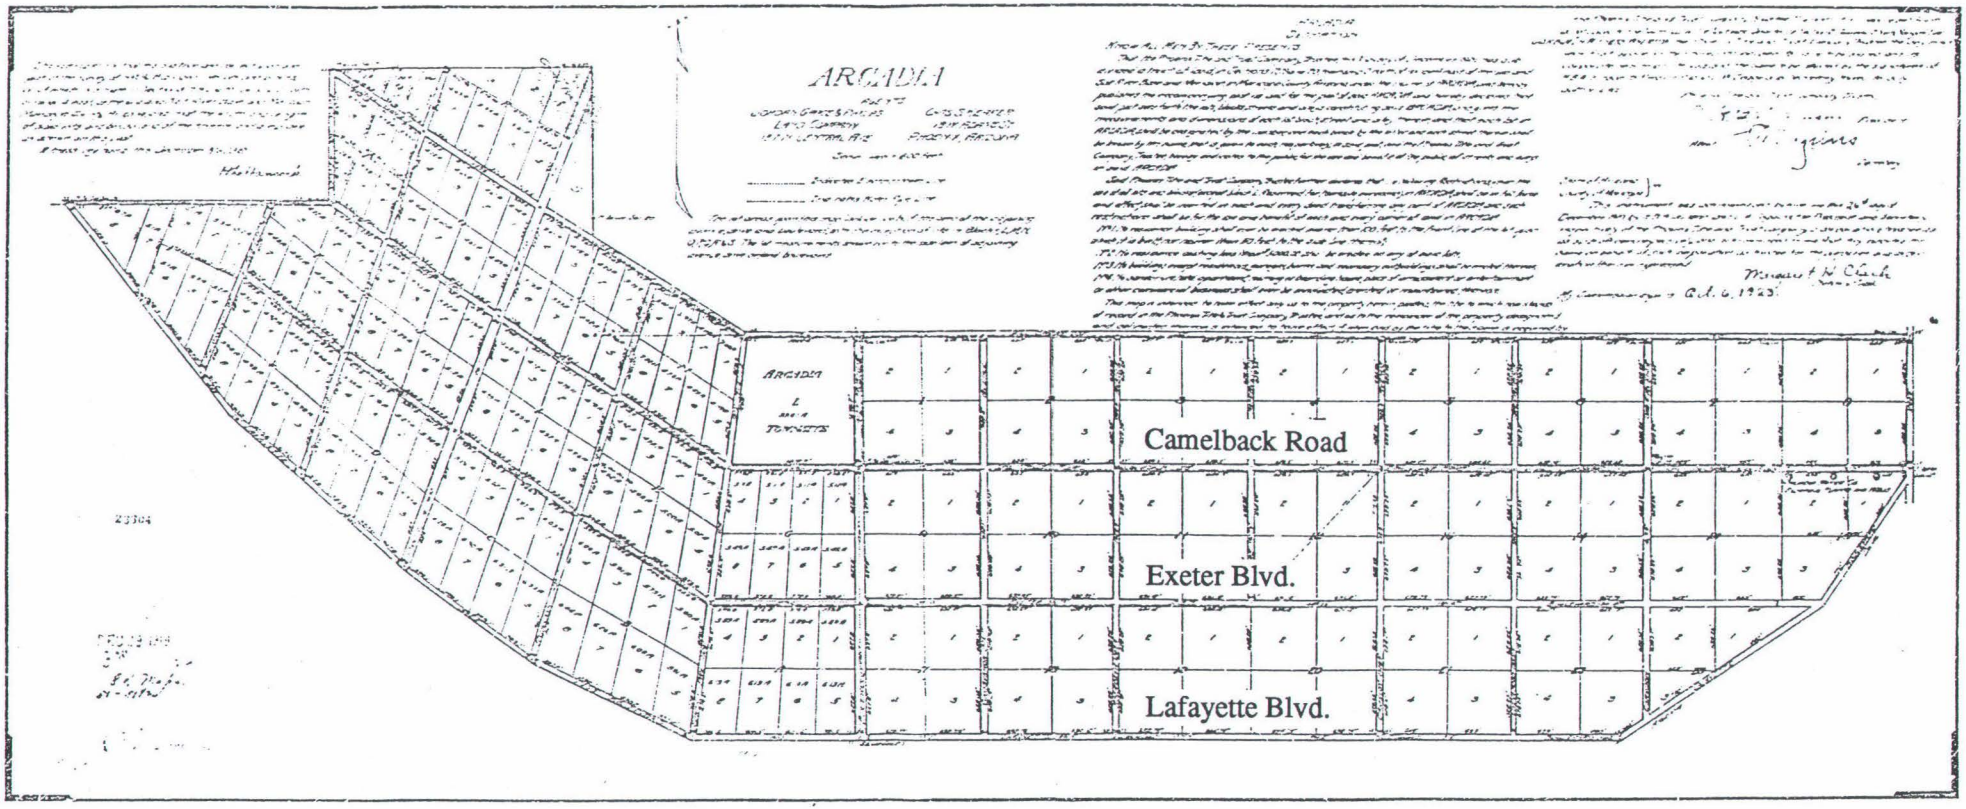

Arcadia

The part of Phoenix commonly referred to as Arcadia encompasses the area north of the Arizona Canal and south of Camelback Mountain between 44th Street and Scottsdale Road. However, the first tract of land platted within this land area was not the original Arcadia development, but rather a development called Citrus Homes. First recorded in June 1915 by L.E. Froman, Citrus Homes was bounded by Camelback Road and Lafayette Blvd. to the north, 56th Street to the east, and the Arizona Canal to the south. The Citrus Homes development contained 25 lots which ran from north to south with the southern boundary of each lot bordering on the Arizona Canal.

Located directly north and northeast of the Citrus Homes development was the original Arcadia development first recorded in December 1919. Developed by the Jordan, Grace, and Phelps Land Company and the Charles Keafer firm, Arcadia was bounded by Lafayette Blvd. to the south, Scottsdale Road to the east, approximately Rockridge Road to the north, and 44th Street to the east. The physical layout of the plat was divided into two distinct sections. First, the area east of 56th Street was divided into 23 blocks with each block further divided into 4 lots of approximately ten acres. Second, the area west of 56th Street was divided into 18 blocks with the majority of the blocks further divided into 8 lots of approximately five acres. One distinct feature of this plat was the designation of Block L, located north of Camelback Road and west of 56th Street, as the Arcadia Townsite.

By dividing the Arcadia Tract into relatively large five to ten acre lots and mandating that no home could be constructed for less than $5000, the developers were clearly attempting to attract the more affluent homeowner who wanted to live in a rural setting. In effect, these large lots were designed to be sold as small citrus orchards. To this end, Arcadia's developers including Seymour Jordan, Robert Grace, and Charles Keafer highlighted the area's agricultural potential and hoped that "the purchasers of this land will engage in the growing of citrus fruits."

In order to successfully develop citrus groves in Arcadia, however, there had to be a stable water source from which the orchards could be irrigated. While Arcadia was located near the Arizona Canal, because of the slope of the land only the lots south of Camelback Road benefited from this water source. Therefore, the developers lead by Seymour Jordan, formed the Arcadia Water Company in 1919. This organization constructed several large pumping plants in Paradise Valley capable of supplying 2100 acres with water. In order to transport

ARCADIA
Original Plat, 1919

this water throughout the Arcadia development, an underground irrigation system was planned. By 1924, construction crews had laid fifteen miles of underground concrete pipe in the area.

However, the original financing for the Arcadia plat had fallen through by the mid-1920s resulting in much of the area being refinanced and replatted by a variety of different owners between 1925 and 1931. These subdivisions included Glencoe Highlands (1925), Arcadia Estates (1926), Arcadia Replatted (1926), Hacienda Allenada (1930), and Alta Hacienda (1931). Although Arcadia was no longer under single ownership, for the most part the new developers still promoted "Arcadia" as a community for affluent people looking for a rural, estate atmosphere. Not only did lot size remain relatively large, ranging from 4 to 10 acres, but minimum cost restrictions for the construction of houses increased. Additionally, the agricultural potential of the area, particularly the cultivation of citrus groves continued to be a priority.

Bounded by 56th Street to the west and Camelback Road to the south, Glencoe Highlands was located in the SE1/4 of the NW1/4, Section 21, T2N, R4E. Duncan MacDonald recorded this plat of twenty-four lots on June 27, 1925.

Arcadia Estates, recorded and platted on March 9, 1926, by the Phoenix Title and Trust Company, was a subdivision of Block L of the 1919 Arcadia Plat which at that time was designated as the Arcadia Townsite. Arcadia Estates was bounded by 54th Street to the west and 56th Street to the east and is located in a portion of the NE1/4 of Section 20, T2N, R4E.

The western half of the original Arcadia Plat was replatted and recorded on July 28, 1926, as the Arcadia Replat by the Phoenix Title and Trust Company. The area included in this replat was bounded by Lafayette Blvd. to the south, 56th Street to the east, and 40th Street to the west excluding Block J of the 1919 Arcadia Plat. The northern boundary of the Arcadia Replat included Camelback Road between 40th Street to approximately 44th Street and extended north of Camelback Road to include portions of the SE1/4 of Section 18, T2N, R4E and the SW1/2 of the SW1/4 of Section 17, T2N, R4E. The area north of Camelback Road which was included in the Arcadia Replat was divided into blocks, but not lots. The Arcadia Replat south of Camelback Road was divided into ten blocks of eight lots, ranging in size from 4 to 6 acres.

There existed several stated requirements concerning house construction in the Arcadia Replat. First, the cost of building a house had to exceed $10,000. This was an increase from a minimum outlay of $5000 in the 1919 Arcadia Plat. This cost requirement was implemented in order to attract only the most wealthy investors and thereby create an exclusive community. A second requirement for construction concerned wood buildings. All wood buildings had to be stained or painted immediately upon construction. Additionally, in an effort to establish continuity of appearance among houses, all new houses were required to "comform and harmonize with the type and exterior design of neighboring buildings within Arcadia Replatted."

Recorded by Charles C. Bradbury, a local Phoenix physician, on April 10, 1930, Hacienda Allenada was bounded by Camelback Road to the north and 56th Street to the west and included the N1/2 of the SW1/4 and the NW1/4 of the SW1/4 of Section 21, T2N, R4E. Hacienda Allenada featured fifteen lots of varying sizes. Like in the Arcadia Repalt, it was

required that a new house cost a minimum of $10,000.

Alta Hacienda was located in the SW1/4 of Section 21, T2N, R4E. Recorded on July 8, 1931, Alta Hacienda featured eighteen lots. Charles C. Bradbury owned all but four of these lots. The ownership of the remaining four lots was divided between George W. Mickle, President and Chairman of the Board of the Phoenix Title and Trust Company and Horace G. Newhall. Restrictions on construction included a minimum cost requirement for each house of $10,000 and that all wooden buildings needed to be stained upon completion.

While the 1919 Arcadia Plat was being subdivided in the late 1920s and early 1930s, the area of land north of Arcadia and south of Camelback Mountain was also being platted for development. Three of these additions included O'Brien's Camelback Lands, Glencoe Heights, Plat One, and Glencoe Heights, Plat Two.

O'Brien's Camelback Lands were recorded by Morrough W. O'Brien on April 24, 1928 and included all of Section 17 of T2N, R3E, except for the S1/2 of the SW1/4, and portions of Section 18. Section 17 was divided into twelve lots.

Phoenix Title and Trust Company recorded both Glencoe Heights Plat One and Plat Two in 1930. Located in the N1/2 of the NW1/4 of Section 21, T2N, R4E, both Plats were divided into several large tracts. As with nearby subdivisions to the south, requirements for construction included a minimum cost for a house of $15,000 and that the general design of the house must "conform and harmonize" with other house designs in the area.
